Art Unit: 2881

The following is an examiner's statement of reasons for allowance: The prior art does not disclose a system for ion beam lithography comprising a plasma generator that produces ions in a plasma generation region, a pattern generator positioned adjacent to the plasma generation region of the ion source for electrostatically producing a controlled pattern of micro-ion-beamlets, a high voltage source connected between the pattern generator and workpiece for accelerating and focusing the micro-ion-beamlets extracted from the plasma generation region through the pattern generator to produce a demagnified final ion beam on the workpiece. While Trotel discloses a maskless ion-beam lithography system that produces a controlled pattern of ion beamlets, as is illustrated in Figure 15, and Leung et al.'s previous U.S. Patent 6,486,480 discloses an ion-beam lithography system that uses a pattern generator positioned adjacent to a plasma generation region to electrostatically produce a controlled pattern of ion beamlets, neither of these patents teach to use a high voltage source connected between the pattern generator and a workpiece to accelerate and focus the beamlets. They both require additional elements to perform these functions. The elimination of these additional elements but retention of their functions would not have been obvious to a person having ordinary skill in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
